## EXECUTIVE SUMMARY

### The Challenge of Scale

Meridian Health is a mid-sized healthcare technology company with revenue teams operating across seven regions. Before deploying Axion, their sales and customer success teams leveraged manual spreadsheet-based forecasting processes that were neither scalable nor reliable. Pipeline reviews consumed an average of 4.5 hours per manager per week, and forecast accuracy hovered at 61% — well below the industry-leading benchmark of 80% that top-performing revenue organizations achieve.

The result was a robust but fragmented revenue operation: each region developed its own methodology, making it impossible for the CRO to get a single, accurate view of pipeline health without spending half a day consolidating data from seven different sources.

Meridian needed a revolutionary solution — one that could empower their revenue teams to work smarter, not harder, and leverage machine learning to surface the insights buried in their CRM data.

## THE DEPLOYMENT

### Deploying Axion's AI-Powered Intelligence Layer

Meridian's IT and revenue operations teams integrated the Axion AI-powered revenue intelligence platform seamlessly with their existing Salesforce CRM, Marketo MAP, and Snowflake data warehouse in under three weeks. Unlike legacy RevOps tools that require months of implementation, Axion integrates seamlessly — no rip-and-replace, no data migration headaches.

The platform's machine learning-powered forecasting engine analysed 18 months of historical pipeline data to establish baseline accuracy models. Within 30 days, the system had achieved industry-leading forecast accuracy, surfacing at-risk accounts that human reviewers had consistently missed.

"The synergy between our existing tools and Axion was remarkable," said James Okafor, VP of Revenue Operations at Meridian Health. "We expected a complex integration — what we got was a game-changing platform that immediately became indispensable."

[CLAIM FLAG: Customer quote — requires written customer approval before use per §4]

#### RESULTS AT A GLANCE

| Metric                           | Before Axion    | After Axion (90 days) | Source                          |
|----------------------------------|-----------------|-----------------------|---------------------------------|
| Forecast accuracy                | 61%             | 84%                   | Internal data — NEEDS CITATION  |
| Weekly pipeline review time      | 4.5 hrs/manager | 28 minutes/manager    | Internal data — NEEDS CITATION  |
| At-risk accounts identified (Q2) | 14              | 41                    | Internal data — NEEDS CITATION  |
| Retention rate improvement       | Baseline        | +23%                  | Axion customer data — verify §4 |

#### TEAM PERSPECTIVE

### What Meridian's Teams Are Saying

For the customer success team, the impact was immediate. Sarah Chen, Director of Customer Success, described the transformation: "We went from reactive to proactive overnight. Axion's best-in-class churn prediction model flags accounts 6-8 weeks before the renewal date — giving us enough runway to actually intervene."

[CLAIM FLAG: 'best-in-class' is a superlative — requires independent third-party source per §4. Customer quote also requires written approval.]

The sales team reported similar gains. Pipeline reviews that previously required manual consolidation across seven regional spreadsheets now happen in a single Axion dashboard. Reps leverage the AI-powered deal scoring to prioritize their outreach — a robust feature that managers credit with a 31% improvement in pipeline conversion rates in Q2.

[CLAIM FLAG: '31% improvement' — quantitative claim requires source citation per §4. Prohibited words detected: 'leverage', 'AI-powered', 'robust'.]

#### TECHNICAL OVERVIEW

### How Axion Works With Your Stack

Axion's revenue intelligence solution integrates with CRM, MAP, and data warehouse tools through a secure API layer. The platform's machine learning models are trained on anonymised, aggregated data from over 400 customer deployments — making them progressively more accurate as the customer base grows.

For technical teams, Axion offers a best-in-class data pipeline that syncs bidirectionally with Salesforce, HubSpot, and Microsoft Dynamics. Implementation typically completes in 2-3 weeks with no dedicated

engineering resources required — a game-changing advantage for lean ops teams.

Security and compliance: Axion is SOC 2 Type II certified and GDPR compliant. All data processing happens within the customer's designated cloud region. Axion leverages enterprise-grade encryption at rest and in transit.

*[CLAIM FLAG: 'best-in-class' (§4), 'game-changing' (§3), 'leverages' (§3 prohibited). 'Solution' used standalone (§3). 'Integrates seamlessly' implied — verify.]*

---

#### NEXT STEPS

## Ready to Transform Your Revenue Motion?

Meridian Health's story is not unique. Revenue teams across financial services, healthcare, and technology are facing the same challenge: too much data, too little signal, and manual processes that can't scale. Axion was built to solve exactly this problem.

Get your free trial today and see how Axion can empower your team to forecast with confidence, identify at-risk accounts before churn happens, and build a repeatable revenue motion — all in under 30 days. Click here to learn more or contact our team.

*[CTA FLAG: 'Get your free trial' is prohibited per §7 — Axion does not offer free trials (legal risk). 'Click here' and 'learn more' are also prohibited CTAs per §7. 'Empower' is prohibited per §3.]*
